

woven vinyl surfaces by texlyweave®

texlymat®

Jan. 2026

Domotex / Hanover

Surfaces meant to be used. Not protected.

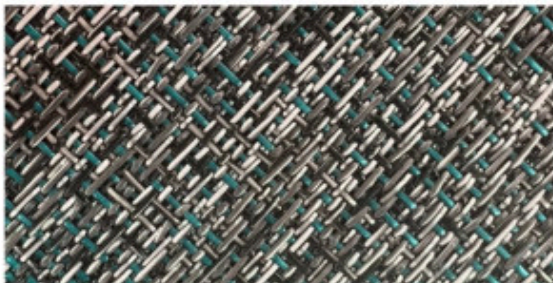

surface style

Surface expression, built on performance.

texlyweave® is developed for walls, flooring, and upholstery, where surface expression matters as much as reliability. The woven structure creates a dynamic visual rhythm, allowing colour and pattern to interact naturally with light and space.

texlymat® applies this material logic to mats and rugs through a tailored, engineered surface made with vinyl-coated yarns. The result is a calm two-tone appearance combined with high wear resistance—designed to remain stable, tactile, and easy to maintain throughout everyday use.

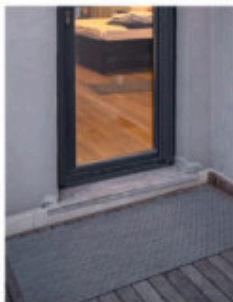

texture detail

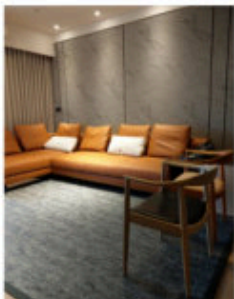

Where texture meets durability and everyday use.

texlymat® is engineered to perform under real conditions. The surface resists UV exposure, atmospheric agents, and repeated rubbing, while remaining easy to clean and sanitize. Durability is approached as part of sustainability: by extending service life and reducing replacement, **texlyweave®** woven vinyl allows surfaces to be used, maintained, and enjoyed for longer—without compromise.

OUTDOOR

Made for outdoor life, this woven vinyl mat handles sun, rain, and daily exposure with ease. It keeps its shape and colour over time, dries quickly, and cleans simply ideal for outdoor spaces designed to be used, not covered up.

INDOOR

A calm surface for everyday interiors. This woven vinyl rug offers structure, durability, and visual balance while remaining easy to maintain. Designed to live quietly within space, it supports long-term use without demanding attention.

KITCHEN

Designed around daily routines, this woven vinyl runner handles spills, cleaning, and long hours on your feet. Practical by nature, it supports kitchen work while keeping the space visually clear and composed.

HALLWAY

Created for movement and repetition, this hallway runner provides a stable, durable surface that holds its form under constant foot traffic. Easy to clean and made to last, it supports shared spaces without interrupting their flow.

Structure first. Longevity follows.
