

We are now passionate about improving the environment, and one of the ways we contribute to this goal is by choosing eco-friendly materials for products and your everyday needs.

Our newest Papyrus is inspired by the textural hues of the Cyperus stem; this warm, cozy pattern sets the stage for a series of delicate, shimmering lines interwoven and detailed that seem to glissade across the surface, giving the impression of a simple parallel and soft structure, but a subtle yet luxurious performance. By employing neutral colors, and more subdued tints, this performance surface creates an elegant and sophisticated, conspicuous feel without being too invasive or moody, and is carefully curated to evoke a sense of renewal in the spring seasons.

There are five colors to choose from, with the ability to place them on walls and windows, breathing life into any space.

Wallcovering & Blinder
