

MAINTENANCE FOR WOVEN VINYL UPHOSTERY

texlyweave® fabric presents a new engineered surface with vinyl-coated yarn that significantly increases wear resistance and two-tone aesthetics that enhance the tactile experience of the textures.

Over-engineered for incredible durability, use texlyweave to meet the needs of today's modern living. Long-lasting colors, unique feel, and modern look! Easy to apply, clean, and maintain; strong, durable, soft, and comfortable.

"The technology allows surfaces to be used, cleaned, and enjoyed longer. "

A brilliant choice for offices, gyms & hotels, the texlyweave wall-to-floor range is also a popular option at home anywhere from ensuites and bathrooms to kitchens and studios where a statement finish is desired.

1. texlyweave® is a tough, durable fabric made from polyvinyl chloride-coated polyester yarn. It can be easily cleaned with a household detergent with a pH of up to 11 and even water. Soil and stains on texlyweave® are removed quickly and efficiently to keep an excellent aesthetic and preserve the original style.
2. Proper routine maintenance, periodic cleanings, and diligent attention to stain-causing spills will increase life circle and perfect hygiene. The level of use of the fabric and the dirt load should determine the frequency. The methods for routine maintenance and cleaning methods also depend on the application. Frequency depends on the amount of soil and dirt texlyweave® is exposed. Dirt and soil will degrade any upholstery woven vinyl, so that proper maintenance will increase its natural life cycle.
3. texlyweave® surface is absorbent. An ample amount of water can be used effectively in daily maintenance. When using water with any of the maintenance techniques, the dirty water should be dried thoroughly. Dry upholstery is woven vinyl with a soft, lint-free cloth or towel.
4. Washing or mopping of texlyweave® woven vinyl possibly leave dirty water in the structure and dries up, causing smudges and aureoles. Dirt and smudges can be removed with mild soap (use the lowest pH detergent that proves successful) and warm water. Cleaning from the bottom upward is most effective. Rinse thoroughly with clean water from the top down, using a sponge.

5. Prompt attention to stains will eliminate any possible reaction between the staining agent and the upholstery woven vinyl. Could you be sure to remove materials containing colors and solvents quickly? Permanent discoloration may transpire if the soil remains on the upholstery woven vinyl for an extended period.
6. Do not use solvents such as Acetone, Pine-Sol, or Citrus based cleaners, as they can damage texlyweave®.
7. A small area should be tested with all cleaners before use to ensure compatibility.
8. Sealers, waxes, stain repellents, and other topical applications are unnecessary for texlyweave®.
9. Direct contact between natural rubber and texlyweave® will cause color migration in texlyweave®. Adequate protection is necessary.

Texlyweave is stain-resistant, not stain-proof. Blot and clean immediately to avoid lasting stains.

Note: Stains that cannot be removed under the listed procedures can be treated with a 1:10 bleach-to-water solution. Mist the key on the area of discoloration and allow it to dwell for 5 minutes. Then, rinse the area with water only to remove the bleach residue. Allow drying completely. Some stains may require a professional to complete the stain removal process.
